

Shahrim

Shahar muammolarini birgalikda hal qilamiz

User & Operations Guide

How citizens, government operators, and administrators use Shahrim.

User & Operations Guide

Shahrim ("My City") is a civic issue-reporting platform for Samarkand. A citizen photographs a street problem; AI writes a description and category; the city sees it on a live map and resolves it; the citizen is notified and rates the fix. All user-facing text is in Uzbek (Latin script). This guide explains how each type of user works with Shahrim.

1. Who uses Shahrim

- **Citizen (fuqaro)** - reports problems, tracks them, and rates resolutions. Uses the Telegram Mini App or the native mobile app.
- **Government operator / Admin** - sees all issues on a map and dashboard, filters them, and resolves them. Uses the web admin portal from a computer.
- **Super-admin (planned)** - manages operators, categories, and districts.

2. For Citizens

Getting started

There are two ways to use Shahrim, both sharing the same account:

- **Telegram Mini App** (fastest): open the bot in Telegram, tap Start (Boshlash), and share your phone number when asked. No password, no signup form.
- **Native app** (iOS/Android): install the app, tap "Telegram orqali kirish", confirm in Telegram (share phone), and you are signed in.

Sharing your phone through Telegram is what verifies your identity - it happens once.

Reporting a problem

1. Tap **Muammo yuborish** (Report a problem).
2. Take a photo (or choose one from the gallery). The photo uploads and the AI analyzes it.
3. The AI suggests 1-2 short descriptions (tap one to use it) and pre-selects a category and urgency. You can always type your own description and change the category.
4. Your location is captured automatically; adjust the pin on the map if needed.
5. Tap **Yuborish** (Submit). You will see "Murojaatingiz qabul qilindi".

If the photo is clearly not a city problem (for example a selfie or food), the app asks you to retake it.

Tracking your reports

Open **Mening murojaatlarim** (My reports) to see every report with its photo, category, date, and current status. Tap one for the full detail, including the status timeline and - once resolved - the city's result photo.

Statuses:

- **Yuborildi** - submitted, received by the city.
- **Ko'rib chiqilmoqda** - under review.
- **Jarayonda** - work in progress.
- **Hal qilindi** - resolved.
- **Rad etildi** - rejected (with a reason).

Notifications and rating

The bot messages you in Uzbek whenever your report's status changes. When a problem is resolved you are asked to rate the work from 1 to 5 stars and optionally leave a comment (**Bajarilgan ishni baholang**).

3. For Government Operators (Admin portal)

Signing in

The admin portal is a separate website used from a computer. Open the portal URL in a browser and sign in with the email and password issued to you. Access is role-restricted (RBAC) - only admin accounts can open it.

The dashboard

- **Map** - all issues shown as pins colored by urgency (red = high, amber = medium, green = low) plus a heatmap of density. Click a pin to open the issue.
- **Analytics** - totals, counts by status, most common categories, a 30-day volume trend, average resolution time, and average citizen rating.
- **Filters** - narrow everything by category, status, urgency, date range, or district.
- **Issue queue** - a sortable, paginated table; click a row to open an issue.

Handling an issue

1. Open the issue to see the photo, description, reporter (name + phone), category, location, and status timeline.
2. **Change status** to "Ko'rib chiqilmoqda" or "Jarayonda" as you work on it.
3. **Resolve**: upload a result photo and a note, which sets the status to "Hal qilindi".
4. **Reject**: set "Rad etildi" and provide a reason.

Every status change automatically sends the citizen a Telegram message; resolving also invites them to rate the work. Your average rating appears in analytics.

4. For Super-admins (planned)

A future super-admin role will manage operator accounts, edit the category list, and configure districts (including routing reports to the right office). The data model and role field already support this; the management screens are on the roadmap.

5. Category reference

- Yo'l shikasti - road damage
- Ko'cha yoritilishi - street lighting
- Chiqindi / axlat - garbage / waste
- Suv oqishi / quvur - water leak / pipes
- Kanalizatsiya - sewage
- Shikastlangan belgi - damaged sign
- Yiqilgan daraxt / shox - fallen tree / branch
- Jamoat transporti - public transport
- Boshqa - other

6. Privacy note

When you submit a report, its photo and location are shared with the city government so they can find and fix the problem. Shahrim stores only what is needed to handle your report.
